COMPLETION DATE

August 2012

SIZE

20,000 SF addition

- Two-story addition to Pure Power's R&D facility in the SCRA Research Park. Project was delivered through a design-build agreement where Mashburn and Pure Power agreed on a GMP based on a preliminary scope.
- Addition provided offices for engineering and support on the second floor, a lab area to accommodate welding and other types of experimental work, and open work areas.
- Preconstruction planning and coordinating design efforts were important to get this project moving forward, delivering a building that is both affordable and functional, while minimizing disruptions.
- Scope included steel framed construction, metal stud framing & drywall and a stucco exterior.
