COMPLETION DATE

May 2015

SIZE

25,000 SF

- New worship center adds a new sanctuary with riser seating, hospitality areas, a spacious foyer, newly expanded nursery, choir and dance practice flex spaces, and administrative offices.
- During preconstruction, Mashburn provided value engineering services to reduce the budget. Our team developed an early site package that enabled us to complete the building pad while tripling parking capacity to support the growing need for spaces.
- Project utilized three pre-engineered building structures with conventional wood and cold formed steel framing methods to achieve the contemporary design. The heavy steel steeple framing and foundation were unique design features that were critical to the success of the project.
- Coordinated with the owner's audio and visual contractor throughout the project's completion.
- Mashburn completed this project on schedule while minimizing disruption to the existing facility.
