- After a competitive bidding process during Preconstruction, the Client chose Mashburn to complete the interior restaurant renovation to this Main Street space. The space was previously leased as a restaurant and now features a serving line, seating, kitchen and storage space.
- The renovations included finishes, structural, mechanical, plumbing, and electrical. The client received a custom built pizza oven which was unloaded and set in place during early morning hours due to restaurant being located at the corner of a major intersection.
- Our team executed the placement of the oven without blocking traffic or pedestrian access to neighboring businesses. The historic building required a permanent structure to be built in the crawl space to support the custom pizza oven as well as a temporary support structure for when the oven was brought into the building to be set in place.
- Structural work was performed in the basement crawl space to work around existing plumbing and electrical lines in addition to those that had to be rerouted for the new restaurant configuration. This project was completed on a tight schedule of 46 days.
